Straight Stitch & Leather **Sewing Machine**

baby lock HAGANE

A high-speed sewing machine designed to handle thick materials and threads with ease

The baby lock Hagane combines the convenience of a professional straight stitch sewing machine with specialised capabilities for sewing leather and thick threads. A powerful motor with high torque, delivers consistent and beautiful stitches across various heavy materials, even at high speeds. The high quality and sturdy metal housing enhances stability and reduces vibration.

Additionally, the Teflon-coated needle plate and foot facilitate smooth feeding of leather, while the enlarged needle hole and enhanced bobbin stopper allow for easy thread release with thicker threads (up to Tex 90). This makes the Hagane an exceptional machine, ready to tackle a wide range of sewing tasks.

Further Functions & Features

- incl. Knee Lever & Extension Table
- large sewing area of 145 x 220 mm
- adjustable stitch length up to 7 mm
- adjustable presser foot pressure
- easy winding with automatic stop function
- LED lighting
- additional available options include: Buttonhole Foot, Levelling Foot, Quilting Foot, Zipper Foot & Stitch Guides

Presser Foot for Leather

The Teflon Foot serves as the standard presser foot. Its design and construction are specifically optimised to easily manage thicker fabrics and accommodate stitch lengths of up to 7 mm.

Inner Shuttle

The Inner Shuttle guarantees high stitch reliability even at high sewing speeds and when sewing thick threads. The bobbin housing is easily accessible – even when the machine is used with an extension table.

Stitch Plate & Enlarged Needle Hole

The Teflon-coated stitch plate provides seamless and consistent feeding of leather materials. The needle hole has been increased to 2.4 mm, and the adjacent groove has been widened to avoid thread jamming, even with thicker threads. This design guarantees outstanding stitch quality for threads up to Tex 90.

Speed & Needle Position

A two-stage control allows for sewing speeds of 500 and 1,500 stitches per minute. A minimum speed of 40 stitches per minute guarantees dependable sewing for materials that cannot be re-sewn. The needle position button can be used to determine the exact position of the needle at the end of the sewing process. This is particularly useful for single stitches.

3-stage Feed Dog

The height of the Feed Dog can be modified at three different levels to suit the weight of the fabric. This adjustment guarantees that light, medium, and heavy fabrics are fed optimally every time.
